

The Fully Welded Difference

Alta Enterprises is the only manufacturer of fully welded thermal pool covers.

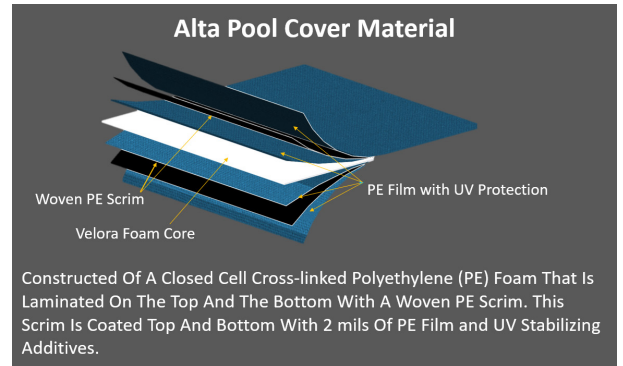

What are “fully welded” pool covers and why are they superior?

Instead of stitching the seams together like a traditional pool cover, Alta welds them together providing a clean and aesthetically pleasing look while adding 3x the strength.

Our uniquely designed 7-layer pool covers are completely mold and mildew resistant, UV protected.

Most importantly, we don't poke holes in our covers. **Stitching holes allow for water absorption and are the number one failure point in pool covers.**

The Fully Welded Difference is the superior look, quality, strength, durability and life expectancy of our fully welded commercial pool covers.

We've eliminated the #1 failure point in pool covers and made them 3x stronger with our unique 7-layer design.

“Great investment. Overall, I would gladly recommend the covers to any pool managers.”

Bradley Griffith, Director of Fitness at John A. Logan College
